The brilliant architect Tatiana Proskouriakoff (1909–1985) painted this memorable watercolor reconstruction of Piedras Negras, a Maya site in northeastern Guatemala, as it might have appeared in Classic Maya times. It is one of many she admirably produced while accompanying expeditions to sites all over Mesoamerica for her book, An Album of Maya Architecture (1946). The history of the Peabody Museum is deeply interwoven with that of Maya research and hieroglyphic decipherment. While at the Peabody Museum in the 1960s, Proskouriakoff studied the texts from Piedras Negras. She daringly proposed that dates in the inscriptions corresponded to key events in the lives of historical individuals, not to astronomical phenomena, as was widely thought at the time. One of her foremost accomplishments was a breakthrough that established the historical nature of the inscriptions, and paved the way for future decipherments. In 1998, colleagues interred her ashes among these buildings at Piedras Negras, overlooking the beautiful Usumacinta River.

Harvard Museums of Science & Culture (HMSC) is a partnership of four Harvard museums that present captivating programming for all ages and a dynamic array of permanent and changing exhibits. HMSC invites you to connect with Harvard University’s distinctive collections and vital research on human civilizations, biodiversity, and the history of Earth and science. Share your creations with us on social media #ColorOurCollections and #HMSCconnects
